AB Bidentate ligands, R1R2M1-R-M2R3R4, (wherein M1, M2, independently = P,
As, Sb; R1, R2, R3, R4, independently = substituted organic group and at
least one of R1, R2, R3 and R4 contains a tertiary carbon atom through
which the group is linked to M1 or M2; R = bridging group based on a
trimethylene group connecting M1 and M2 of which the middle carbon atom is

double bonded to a non-metal element chosen from group 14, 15 or 16 of the periodic table of elements) were prepared. For example, di-tert-butylphosphine is reacted with 3-chloro-2-chloromethyl-1-propene to give the corresponding bisphosphonium salt, which is treated with NaOH to give 66% 3-(di-tert-butylphosphino)-2-(di-tert-butylphosphinomethyl)-1-propene, (dtbpm). The prepared compds. are ligands in the palladium catalyzed carbonylation of ethylenically or acetylenically unsatd. compds. For example, 3-pentenitrile undergoes carbonylation in the presence of dtbpm and Pd(OAc)₂ to give the corresponding linear 5-cyanovaleric ester.

PRIORITY APPLN. INFO.: TW 2001-90119851 A 20010814

AB An efficient process for recovering and manufacturing C4-6 dicarboxylic acids and esters thereof from alkali waste liquid generated in manufacturing caprolactam is provided. The process comprises (1) neutralization of the alkali waste liquid generated in manufacturing caprolactam with H₂SO₄ to adjust the pH, separation of the oil layer from the water layer, and addition of HNO₃ to the oil layer to convert organic substances into dicarboxylic acids and to obtain a solution of dicarboxylic acids, (2) concentration of the above solution to distill low b.p. monocarboxylic acids and HNO₃ in the first stage and concentration and decomposition of residual HNO₃ and nitro compds. in the second stage to obtain a crude concentrate mainly containing C4-6 dicarboxylic acids, (3) two-step esterification involving addition of C1-4 alkyl alcs. to the crude C4-6 dicarboxylic acid concentrate followed by obtaining a semiesterification intermediate product in the first stage and the obtaining a crude dicarboxylic acid ester product in the second stage, and (4) distillation of the crude dicarboxylic acid ester product to obtain a single or a mixture of dicarboxylic acid esters. Thus, an oil layer (120 g) containing formic acid 2.08, acetic acid 2.07, butyric acid 3.19, valeric acid 0.23, caproic acid 3.19, succinic acid 0.08, glutaric acid 0.85, adipic acid 10.15, 6-hydroxyhexanoic acid 15.07, H₂O 25.62, and others 35.24 weight% (obtained as described in step 1) was added portionwise at 30° over .apprx.20 min to 600 g 30% aqueous HNO₃, allowed to react at 30° for 30 min, 50° for 1 h, and 70° for 1 h, and concentrated until the temperature reached at 120°, followed by passing steam to drive out HNO₃ from the solution, stopping steam, and concentration of the resulting solution at

140° to obtain a concentrate (61.5 g) containing formic acid 0, acetic acid 0, butyric acid 0, valeric acid 0.29, caproic acid 0, succinic acid 14.27, glutaric acid 27.36, adipic acid 34.03, 6-hydroxyhexanoic acid 0.53, H₂O 0, NO₃- 0.045, and others 36.24 weight%. MeOH 100, the crude concentrate 50, and p-toluenesulfonic acid monohydrate 0.5 g were added to a glass flask fitted with a reflux condenser and allowed to react at 80° for 2 h for the first-stage esterification, followed by removing the reflux condenser, distilling residual MeOH and water formed, raising the temperature to 110°, gradually adding 200 g MeOH over 4 h for the second-stage esterification, and distilling unreacted MeOH and H₂O formed to give crude dicarboxylic acid ester product (53.5 g) containing succinic acid Me ester 14.13, glutaric acid Me ester 27.68, and adipic acid Me ester 32.64 weight%. The crude dicarboxylic acid ester product (50 g) was distilled at 4 Kpa (130 Torr) to collect the distillate at 110-190°. A clear mixture of C4-6 dicarboxylic acid Me ester (35.1 g) of high purity containing succinic acid Me ester 17.93, glutaric acid Me ester 37.58, and adipic acid Me ester 41.61 weight% was obtained.

IT 106-65-0P, Succinic acid dimethyl ester 627-93-0P, Adipic acid dimethyl ester 1119-40-0P, Glutaric acid dimethyl ester

AB The title aqueous layer, containing adipic 21, glutaric 5, and 2 oxalic acids 3%, and smaller amts. of cyclohexanol, cyclohexanone, esters and tar, was oxidized at 2.5 atm in 2 stages at 78-100° with HNO₃. The H₂O and HNO₃ were distilled in vacuo to give a melt containing 1.5-3.0% HNO₃ and 97% dicarboxylic acids comprising adipic 19-24, glutaric 42-55, succinic 25-33, and oxalic 0.2-4%. The melt was converted to Me esters at 200° with MeOH in 2 hr in an autoclave. Distillation in vacuo gave the Me esters in 92-4% purity, suitable for plasticizer use.
